- Electric head lift system
- Fully guarded with hinged front guard panel with electric safety interlock
- Emergency Stop button
- Optional Touch Screen PLC available
- Optional frame kit for conversion to free-standing unit.
- Optional Stainless Steel guard and control panel are available.

### Compact Table Top Drag Finisher

Our new compact table top drag finisher features the same heavy-duty aluminum extrusion frame construction as our larger models, but fits on your table top!

This versatile machine is ideal for smaller machine shops for the purpose of tool honing and edge prep as well as for any polishing application. These machines are also used in the pharmaceutical industry for the polishing of pill punches.

### MACHINE DESIGN

As with all of our MFD Series Drag Finishers, the Model 50 features heavy-duty frame construction and is fully guarded for safety. Opening hinged front guard includes safety interlock switch.

A heavy-duty motor/gearbox drives two heads which can be fitted with custom product holders specific to your application. The control panel features a digital process timer, vary speed and auto reverse to ensure the proper processing of any shaped workpiece. The main head is lowered and raised with an electric lift system.

The media container is Stainless Steel, removable, and has a 40L capacity. The machine can be ordered with a frame kit to convert to a free standing floor unit. Optional locking swivel casters are also available with the frame kit to truly make this a compact, portable polishing solution.

Machine is UL Listed and is CE Compliant.

### TECHNICAL DATA

Machine Type	Height (mm)	Width (mm)	Depth (mm)	Heads	Weight (kg)	Power Consumption
MFD-50	820	570	260	720	75	0.4KW / 300V
